

How to assemble a FourUs Booth

Four Us[®] Booth

FourUs Booth:

Tools used in the manual:

Size 13" socket wrench

Drill with bits accordingly

1

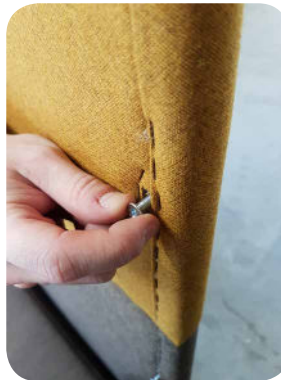

ATTENTION:

- 1) ALL BOLTS AND SCREWS ATTACHED NEED TO BE USED FOR CORRECT ASSEMBLY!
- 2) Do not use a knife or other sharp object to unpack the product.
- 3) Always be at least two persons to set up the FourUs Booth.
- 4) Make sure to be gentle when handling the Booth components.
- 5) Be careful not to let the fabric touch the floor, as it can be damaged or get dirty.

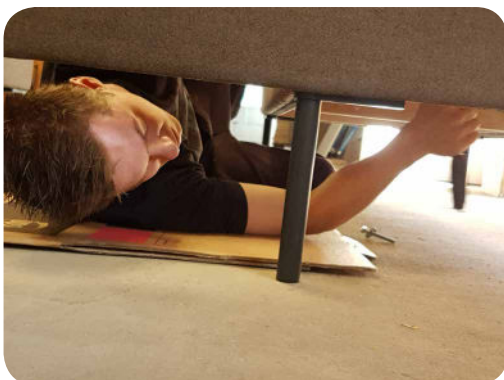

- 2 Place the two couch parts so there is 800mm between the inner footplates. It is important the two couches are parallel. When the couches are in place, take the wall and place it on top of the footplates (letting the wall stand where the green arrows point, still physical holding the wall). The wall need to fit into the keyholes marked with a red arrow.

- 3 The screws in the wall can be turned until they fit with the couch keyhole. The screw is aimed into the big part of the keyhole, so the wall can be pushed into place.

- 4 Insert the longest bolts under the couch. It goes through the couch hole and into the wall where a threaded bush is placed.

5

It is important to start with the bolt the farthest away from the middle of the Booth. All the bolts must be tighten tightly, again starting farthest away from the middle.

6

Repeat step 5 until all of the bolts are tighten so hard, that you can hear the wood squeak. It is important that the foam/fabric in the couch and wall are pressed together as the picture below shows.

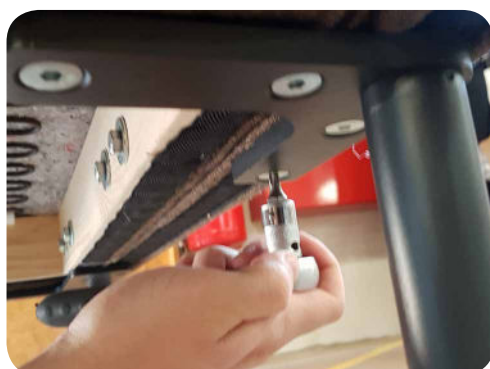

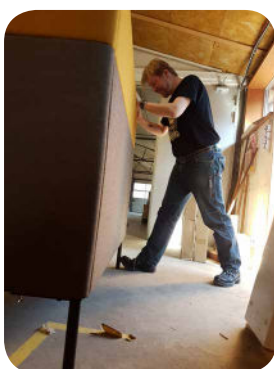

7

Before attaching the bolts into the footplates, it is important to screw the bolts which is already in the couch out a little, so the footplate is loose, as shown on the pictures below.

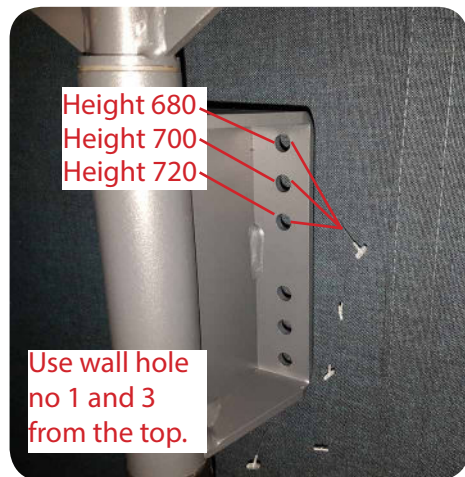

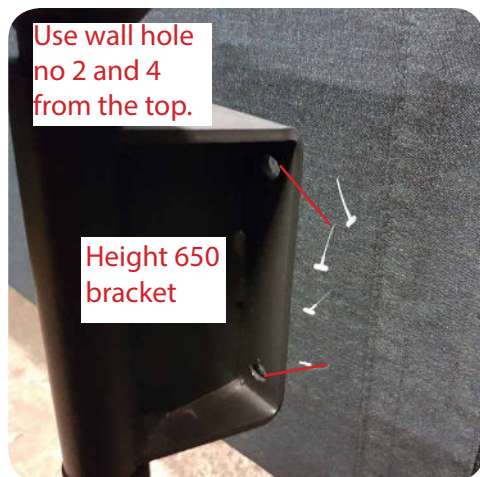

- 8 Screw the bolt in the wall, first using fingers and then tighten with according tools. It might be necessary to tweak the couch a little while aiming the bolts into the holes.

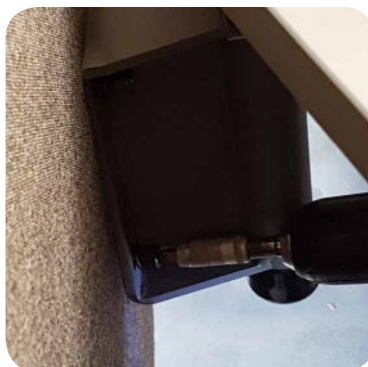

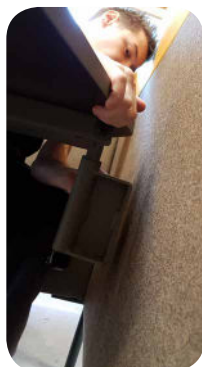

- 9 Repeat step 4 to 8 on the other side of the Booth, until every bolt is attached in the couch and wall.

- 10 There are 8 holes for the pivottable which is marked with a white pin (see left picture below). Only 4 holes will be used - which ones depend on the height on the tabletop. See pictures below for which holes to use for the different tabletop heights. Cut a 1cm line on top of the 4 holes you want to attach screws in.

- 11** Place the bracket on the pivottable so the 4 holes are concentric with the 4 holes which is going to be used according to step 10. When the bracket is in place, screw the bolts (with washers attached) loosely in with the fingers, before tightening up with a tools.

- 12** The FourUs Booth is now fully assembled. Attention: When moving the FourUs Booth, it is important to be 2 or more persons, to take as much pressure off the legs as possible.
