

# Dot.

The Dot panel has been designed to improve the quality of the acoustics in different environments, controlling reverberation at important speech frequencies.

The size and spacing of the holes, together with the depth of the system are mathematically related to the spectrum of sound absorbed by the panel, the loudest region of our speech frequency range.

Available in a range of finishes, including Wood Veneer, and Valchromat, and five different sizes available, the Dot panels can be designed to blend into any working environment and colour pallet.

 4 weeks

 5 year warranty

 3.5kg  
DOT600600  
other weights on application

## Features

Part of the Positive Sound acoustic collection

5 different panel sizes

Mathematically designed panel to improve the quality of acoustics

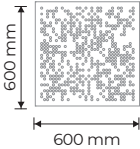

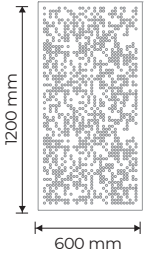

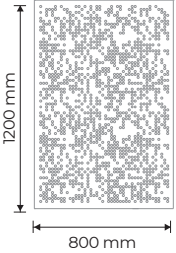

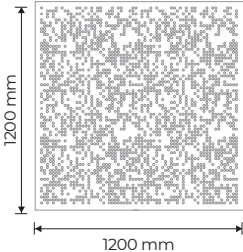

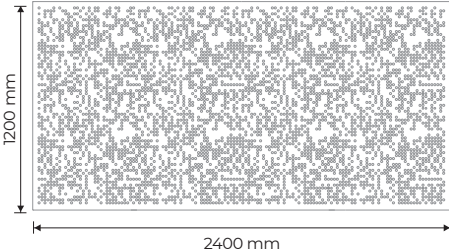

Available in a variety of finishes

Absorbs a large range of speech frequencies without 'deadening' the room

Fixings included with the panel
